Sanitizer Dispenser Non Electric Manufactured by Desco Medical India

Specification:-

Capacity: The dispenser should have a capacity of 650 ml, which means it can hold up to 650 milliliters of sanitizer.

Material: It's common for these dispensers to be made from durable and easy-to-clean materials like plastic or stainless steel.

Dispensing Mechanism: Look for information on how the sanitizer is dispensed. It might have a push-button, lever, or some other manual mechanism for controlled dispensing.

Sanitizer Dispenser Non Electric

Design: The design should be user-friendly, with clear instructions for use. The dispenser might have a transparent section to help users monitor the sanitizer level.

Mounting: Check whether the dispenser is meant to be mounted on a wall or if it's designed for tabletop use.

Refillable: Non-electric dispensers are generally designed to be refillable. Look for information on how to easily refill the dispenser when the sanitizer runs out.

Drip Tray: Some dispensers come with a drip tray to catch any excess sanitizer and keep the area clean.

Dimensions: The dimensions of the dispenser can vary. Make sure it fits well in the intended location.

Locking Mechanism (Optional): In certain settings, such as public restrooms, a locking mechanism might be desirable to prevent tampering or theft.

Compatibility: Ensure that the dispenser is compatible with the type of sanitizer you plan to use—whether it's gel, liquid, or foam sanitizer.

Hygiene and Maintenance: Consider features that facilitate easy cleaning and maintenance to ensure good hygiene.
